**UREACH TECHNOLOGIES MAKES CONVERGED MESSAGING A REALITY  
FOR VERIZON CUSTOMERS**

*-- Verizon deepens relationship with uReach to meet key business objectives in thriving  
Latin American market --*

**HOLMDEL, NJ – Feb. 21, 2006** – uReach Technologies ([www.ureachtech.com](http://www.ureachtech.com)), a leading provider of converged communication solutions for fixed-line, mobile, and broadband service providers, today announced it has been selected by Verizon to provide a next generation messaging solution for consumers and small businesses in The Dominican Republic. This latest engagement is the third with Verizon for uReach Technologies, with the company having already provided enhanced voice messaging for Verizon in the Western U.S. and unified communications in the Eastern U.S.

The new service bridges VoIP, fixed-line and mobile telephone service for Verizon subscribers by allowing them to aggregate all their messages, regardless of type, into a single mailbox, that can be universally accessed. Facing mounting competitive pressures and rising subscriber demands for next generation services, Verizon chose uReach's Converged Services Framework (CSF) to bring this amazing new service to market quickly and economically.

“When we set out in 2003 to find a next generation messaging solution for our subscribers, we wanted to create a converged experience for them – to bring all their voicemail, email and fax messages together in one place - regardless of how they accessed the system,” said Virgilio Castillo, Director of Data Products, for Verizon DR. “At the moment of our evaluation, uReach Technologies’ was the only vendor that could deliver the application functionality Verizon required while meeting the technical challenge of simultaneously servicing traditional legacy TDM network users and next generation VoIP network users from a single, converged, platform.”

Leveraging a standard-based software architecture running on open systems, uReach's Converged Services Framework (CSF) was designed from the ground up to meet service providers' stringent requirements for reliability and availability, while remaining cost-effective to deploy and operate. uReach further differentiates itself by offering both a turn-key managed service and fully-licensed solution for service providers.

“Our expanding relationship with Verizon is a great example of how we approach our customers,” said Krishnamurthy Kambhampati, CEO and co-founder of uReach Technologies. “Working together, Verizon and uReach have consistently demonstrated leadership and an ability to innovate in the marketplace. We're very proud that Verizon has chosen to deepen that relationship by relying our technical expertise and application strength to help make convergence a reality for their customers.”

uReach Technologies will be demonstrating its Converged Services Framework at the Spring VON 2006 Conference & Expo in booth 1825 and 425.

#### **About uReach Technologies**

uReach Technologies, Inc is the leading provider of converged communication solutions for the service provider market. The uReach Converged Services Framework (CSF) offers a standard-based and IMS-compliant approach for uniformly deploying value-added voice and data services across wireless, wireline and IP properties quickly, economically and in scale.
